JENNIE**

CEO, Clafiya

It's important for us to collaborate to make the pie larger instead of everyone of us chasing the same thing and making the pie smaller.

We should also focus a bit more on doing stuff that can be built upon by others who decide to follow the path that we have followed not just being profit oriented alone.

- Peter Bunor

Diagnostics is the umpire of medicine as 3 out of 4 patients will need diagnostic investigations to make definitive diagnosis.

We have to put infrastructure/policies in place to promote research and development to come up with our own reagents.

It helps us to scale up and meet more needs.

- Dr. Olayemi Dawodu

We need to put in more effort into insurance education.

A lot of people who have insurance plans don't use them because they believe the process of using it is laborious.

Also testimonies on how health insurance has impacted people's lives needs to be talked about more so that the benefits of health insurance are not just abstract.

- Dr. Yetunde

Telehealth is important to have seamless access to healthcare.

Telemedicine works, telehealth works and it's not to replace the system but compliment it.

Telemedicine works and it involves getting around the roadblocks.

Telemedicine is profitable though its adoption is slow but it's going to work especially in Nigeria'

- Dr. Kolawole Akinjiola

We need to think creatively and collaborate to solve problems that are barriers to us scaling up and drawing up the volume.

- Dr. Idowu Adebiji

We can't just have anyhow partnerships, we need strategic partnerships that help us to achieve the goal of reducing maternal mortality in Nigeria.

The partnerships need to be serving the goal or aim for which they were formed.

- Kemi Olawoye

Successful partnerships with HMOs are based on areas of value creation by helping HMOs save money and create value at the same time.

There must co-creation and exchange value.

The government should have a central spine that all the healthcare data collected in different silos can be harmonized.

- Dr. Debo Odulana

There has to be multi sectoral collaboration and participation to make things work.

It is not just about the health sector making decisions, the other sectors; power, technology for example have to be involved in these partnerships to make impact.

- Juliet Odogwu

We cannot remove the importance of tech but we need to rethink how we plug in or apply tech.

We can't just copy and paste what is done in saner climes, we need to fit in the peculiarities of our own people. For instance, how Whatsapp is widely used by our people in order to have more reach.

- Dr. Timilehin Ogunkoya

Doing advocacy in rural areas will help us get to rural areas by partnering with NGOs to provide mental health access to people in the grassroots.

Startups can gain a lot from B2B models.

Healthcare and healthcare solutions will not grow without all hands on deck and it can't be possible without leveraging partnerships.

- Joshua Koya
